

# Plastic Bins: Fixings

## Bolt Down Fixing:

Manufactured with four predrilled holes, Broxap's litter bins can be fixed in place using a "bolt down" method. These predrilled holes, which can be found in the base of the litter bin, allow the product to be securely fixed to a concrete base with four M10 x 120 raw bolts.

## Pre-cast Concrete Slab Fixing:

The pre-cast concrete slab fixing technique allows litter bins to be freestanding without the use of a permanent fixing method. The litter bin's internal frame is secured to the external concrete slab using four M10 x 120 fixing bolts. This fixing method is only available on selected models.
